HEALTH PLANNING APPLICATIONS OF OPERATIONS

RESEARCH AND SYSTEMS ANALYSIS:

A SELECTED BIBLIOGRAPHY

Prepared by

Thomas M. Dunaye, Dr.P.H.

Associate Professor of Health Administration
Health Planning Program, School of Health
The University of Oklahoma Medical Center

Bobbie L. Foote, Ph.D.

Associate Professor of Industrial Engineering
Health Planning Program, School of Health
The University of Oklahoma Medical Center

Sue L. Dunaye, M.P.H., Consultant

The University of Oklahoma Medical Center

Computer, engineering, and quantitative applications in community health services, although still a relatively recent development, have made an invaluable contribution to this field and promise even greater potential for the future.

The following bibliography of available literature indicates that experience with these tools and techniques has varied widely and grown rapidly with the current state of the art. Its purpose is to offer a means of easily locating relevant material on the subject. While these references are not exhaustive or all-inclusive, they do represent a substantial inventory of existing publications. The authors would recommend, however, that the listings be updated periodically to keep health planners and administrators abreast of new advances.
